## Module 16 – Professional Development

### Assignment 3: Feedback on Personal Website from Coaches for Nyabisi Mengo

After creating the first draft of my website, I received the feedback below from the coaches, suggesting areas of improvement:

#### **1. Design & Layout (The "What I Do" Section)**

- Fix Alignment: The current layout is inconsistent and visually cluttered. Center your headers and ensure text and images align properly.
- Fix Overflows: Text and sections are currently being cut off on the right side of the screen. Ensure the design is responsive and fits the frame.
- Color Palette: The red-over-blue navigation highlight is "aggressive." Consider a more professional color, as red can signal "danger" to a user's brain.

#### **2. Navigation & Functionality**

- Streamline the Resume: Remove the "message me for a copy" barrier. Embed your actual resume and provide a direct Download button to avoid losing potential recruiters.
- Simplify Project Links: Remove the red numbers under "Latest Projects." Use a single, clear link per project rather than multiple numbers that lead to the same destination.
- Social Media: Update the static social icons. Ensure they point to your personal profiles rather than the default Wix links; remove any platforms you don't actively use.
- Header & Footer: Remove the "Explore Now" button (it's redundant) and the "Mailing List" footer if you aren't actively managing one.

#### **3. Content & Personal Branding**

- Personalize Imagery: Replace generic template photos and the "What I Do" images with unique visuals that actually represent you and your specific work.
- Update Projects: Ensure all project thumbnails display your actual code/interfaces rather than placeholder images.
- Voice & Tone: While the "BisiBot" is fun, ensure it doesn't distract from your professional image. Make the "Mailing List" text (if you keep it) sound like a personal invitation from you, not a generic team.

#### **4. Technical Bug Fixes**

- Links Page: This section appears unfinished. Use it to share external platforms you find useful or developer resources you're interested in.
- Home Page Title: Adjust the CSS/layout so the main title is no longer partially cut off.
- Broken Navigation: Fix the "Links" page navigator so it functions correctly across the entire screen.
